# ntfsMountX help

1. Delete folder error

When deleting a folder, a warning box will pop up like this.

This is an error of "Finder App" when operate folder for ntfsMountX disk. The processing method is to 1) delete the folder multiple times until it is completely deleted; 2) Delete using the rm - r command in the "Terminal App"

2. About .DS_Store .Spotlight-V100 and other metadata

.DS_Store
a file that stores custom attributes of its containing folder, such as folder view options, icon positions, and other visual information.

.Spotlight-V100
spotlight index for the folder

._filename
macOS stores metadata and resource forks using a technique called AppleDouble, in which the data fork is written as one file, and the resource fork and metadata are written as an entirely separate file preceded by a "._" naming convention. For example: ExampleFile.psd would contain the data fork, and ._ExampleFile.psd would contain the resource fork and metadata.

._filename has been disable in ntfsMountX. Other file may create when you use ntfs disk.
